

## Lawn/Turf Conditioner

**Mineral Magic™** is a permanent soil amendment that retains both water and nutrient in any type of soil. It can be applied both before planting and on established turf and here are some tips and tricks of how to best utilize the magical mineral.

## Application Methods in Order of Effectiveness

1. **On construction/establishment;**
  - a. Blend/Till/Hoe 500gm/m<sup>2</sup> into the soil to a depth of 100mm prior to planting/turfing
  - b. Use in conjunction with a premium organic amendment/manure.
2. **In conjunction with any renovation;**
  - a. Topdress after coring, scarifying, field topping, fraise mowing or verticutting and rub in vigorously.
  - b. Depending on how much the surface has been disturbed and what turf height etc – rates can start from 100gm/m<sup>2</sup> remembering ultimately you want to finish up with 500gm/m<sup>2</sup> so that would mean 5 applications (over whatever period of time your budget allows)
  - c. Water in heavily to charge up mineral. It will not burn turf however.
3. **Spread directly onto surface as you would fertiliser;**
  - a. Topdress after coring, scarifying, filed topping, fraise mowing or verticutting and rub in well
  - b. Best to leave catchers off your mowers for 2-3 weeks to avoid picking up the granules when you mow.
  - c. Water in heavily to charge up mineral. It will not burn turf however.
4. **Best time of year ?;**
  - a. Anytime

## Rates

- Minimum rate 100gm / m<sup>2</sup> ( 1 tonne / Ha )
- On existing turf best not to go above 250gm/m<sup>2</sup> per application ( 2.5 tonne / Ha )
- If installing into new turf (prior to laying or planting) – best to go with the full rate of 500gm/m<sup>2</sup> ( 5 tonne / Ha )
- Don't apply more than 500gm/m<sup>2</sup> in total. Once you have attained that, your soil is permanently amended.
